AL..., AL...Z..., TAL... 3-pole Contactors

d.c. Operated

Screw Terminals 

Application

AL..., AL...Z..., TAL... contactors are mainly used for controlling 3-phase motors and more generally for controlling power circuits up to 690 V a.c. or 220 / 440 V d.c. These contactors have a low power consumption for direct control from PLC outputs. Consequently they are perfectly adapted for all applications associated with PLC control.

Description

The **AL...** series 3-pole contactors are of the block type design.

The **AL...Z...** series 3-pole contactors are of the block type design with a very low coil consumption of 2.4 W.

The **TAL...** series 3-pole contactors are of the block type design with a large coil voltage range.

- Main poles and auxiliary contact blocks
 - AL 9 ... AL 40 1-stack contactors:**
 - 3 main poles,
 - 1 built-in auxiliary contact,
 - front or side mounted add-on auxiliary contact blocks.
 - AL 9 ... AL 40 2-stack contactors:**
 - 1st stack with 3 main poles,
 - 2nd stack with 4 built-in auxiliary contacts.
- The built-in auxiliary contact elements are mechanically linked
- Control circuit: d.c. operated with solid core magnet circuit and low consumption coil. The coil must be energised from a d.c. supply and the polarity (+ and -) must be respected.
- Accessories: a wide range of accessories are available.

Variants

- 4-pole: AL 9 ... AL 26 contactors (with 4 N.O. or 2 N.O. + 2 N.C. main poles).
- AL 9..ST to AL 16..ST with spring terminals (see page 4).

Contactor designation explanation

1) **AL 9Z-30-10**

Z = Version 2.4 W

2) **TAL 9-30-10**

T = Large voltage range

Blue = Standard contactor features

Black = Different variations according to the application

AL..ST, AL..Z..ST, TAL..ST 3-pole Contactors

d.c. Operated
Spring Terminals

Application

AL..ST, AL..Z..ST and TAL..ST contactors are the spring terminal version of AL-range.

The ST-range of contactors use ABB Entrellec's proven spring terminal technology giving the following benefits:

- a fast connection on the front face, which saves labour time,
- vibration proof,
- no need to retighten the terminals saving maintenance labour time.

Description

The **AL..ST** series 3-pole contactors are of the block type design.

The **AL..Z..ST** series 3-pole contactors are of the block type design with a very low coil consumption of 2.4 W.

The **TAL..ST** series 3-pole contactors are of the block type design with a large coil voltage range.

- Main poles and auxiliary contact blocks

AL..ST, AL..Z..ST, TAL..ST 1-stack contactors:

- 3 main poles,
 - coil terminals,
 - front mounted add-on auxiliary contact blocks.
- Control circuit: d.c. operated with solid core magnet circuit and low consumption coil. The coil must be energised from a d.c. supply and the polarity (+ and -) must be respected.
 - Accessories: a wide range of accessories are available.
 - Connection: the cables are connected via the front face with the possibility to use two different types of cables with different cross-sections.

Contactor designation explanation

- 1) **AL 9Z30-00ST**
ST = Spring Terminals
Z = Version 2.4 W
- 2) **TAL 9-30-00ST**
ST = Spring Terminals
T = Large voltage range

Blue = Standard contactor features

Black = Different variations according to the application

Electrical Durability for AC-15 Utilization Category

AC-15 utilization category according to IEC 60947-5-1 / EN 60947-5-1:

- making current: $10 \times I_e$ with $\cos \varphi = 0.7$ and U_e
- breaking current: I_e with $\cos \varphi = 0.4$ and U_e

This curve represents the electrical durability of the built-in or add-on auxiliary contacts in relation to the breaking current.

The curve has been drawn for resistive and inductive loads up to 690 V, 40 ... 60 Hz.

AL.. Contactors

Electrical Durability

Electrical Durability for AC-1 Utilization Category $U_e \leq 690\text{ V}$. Ambient Temperature $\leq 55\text{ }^\circ\text{C}$

Switching non-inductive or slightly inductive loads. The breaking current I_b for AC-1 is equal to the rated operational current of the load.

Example:

I_b / AC-1 = 35 A – Electrical durability required = 560 000 cycles.

Using the AC-1 curves above select the AL 26 contactor at intersection "O" (35 A / 560 000 cycles).

Electrical Durability for AC-3 Utilization Category - $U_e \leq 500\text{ V}$. Ambient Temperature $\leq 55\text{ }^\circ\text{C}$

Switching cage motors: starting and switching off running motors. The breaking current I_b for AC-3 is equal to the rated operational current I_e ($I_b = I_e = \text{motor full load current}$).

Example:

Motor power 9 kW for AC-3 - $U_e = 400\text{ V}$ utilization – Electrical durability required = 2.3 million cycles.

9 kW, 400 V corresponds to $I_e = 18.3\text{ A}$. For AC-3: $I_b = I_e$. Select the AL 26 contactor at intersection "O" (18.3 A / 2.3 million cycles) on the curves (AC-3 - $U_e \leq 500\text{ V}$).

NL.. Contactor Relays

d.c. Operated

Screw Terminals 

Application

NL.. contactor relays are used for switching auxiliary circuits and control circuits. Their low power consumption allows the direct control from transistor PLC outputs.

Description

The NL.. contactor relays are of the block type design.

The NL Z.. contactor relays are of the block type design with a very low coil consumption of 2.4 W.

The TNL.. contactor relays are of the block type design with a large coil operating range.

- Poles:
 - 1-stack contactor relays: 4-pole.
 - 2-stack contactor relays: 8-pole, with mechanically linked contact elements.
The width of 8-pole devices is identical to that of 4-pole devices; only the depth is increased.
- Control circuit: d.c. operated with solid core magnet circuit and low consumption coil. The coil must be energised from a d.c. supply and the polarity (+ and –) must be respected.
- Accessories: a wide range of accessories are available (⇐ see page 34).

Variant

- NL..ST version with spring terminals (page 30).

Contactor relays designation explanation

1) **NL Z 40 E**

Z = Version 2.4 W

2) **TNL 40 E**

T = Large voltage range

Blue = Standard Contactor relays features

Black = Different variations according to the application

NL..ST Contactor Relays

d.c. Operated
Spring Terminals

Application

NL..ST, NL Z..ST and TNL..ST contactors are the spring terminal version of the NL-range.

The ST-range of contactor relays use ABB Entelec's proven spring terminal technology giving the following benefits:

- a fast connection on the front face, which saves labour time,
- vibration proof,
- no need to retighten the terminals saving maintenance labour time.

Description

- Poles and coil:
 - 1-stack contactor relays: 3-pole + coil terminals on the same stack.
 - 2-stack contactor relays: 7-pole + coil terminals on the first stack
The width of 7-pole devices is identical to that of 3-pole devices; only the depth is increased.
- Control circuit: d.c. operated with solid core magnet circuit and low coil consumption coil. The coil must be energised from a d.c. supply and the polarity (+ and -) must be respected.
- Accessories: a wide range of accessories are available (⇨ see page 36).
- Connection: the cables are connected via the front face with the possibility to use two different types of cables with different cross-sections.

Contactor relays designation explanation

- 1) **NL Z 30 E ST** ⇨
 Z = Version 2.4 W ST = Spring terminals
- 2) **TNL 30 E ST** ⇨
 T = Large voltage range ST = Spring terminals

Blue = Standard contactor relays features

Black = Different variations according to the application

Short-circuit protection $U_e \leq 500$ V a.c. - gG type fuse	A	10
Rated short-time withstand current I_{cw} at 40°C ambient temp., in free air, from a cold state		
1.0 s	A	100
0.1 s	A	140
Minimum switching capacity (1) with a failure rate of 10^{-6} acc. IEC 60947-5-4		17 V / 5 mA
Heat dissipation per pole at 6 A (1)	W	0.10
Max. electric switching frequency	cycles/h	1200
Mechanical durability		
– millions of operating cycles		> 20
– max. mechanical switching frequency	cycles/h	6000

(1) Screw terminal contactors only.

Electrical Durability for AC-15 Utilization Category

AC-15 utilization category according to IEC 60947-5-1 / EN 60947-5-1:

- making current: $10 \times I_e$ with $\cos \varphi = 0.7$ and U_e
- breaking current: I_e with $\cos \varphi = 0.4$ and U_e

This curve represents the electrical durability of the contactor relays, in relation to the breaking current.

The curve has been drawn for resistive and inductive loads up to 690 V, 40 ... 60 Hz.

– NL., NL..ST, NL Z., NL Z..ST and TNL.. contactor relays.

NL.., NL..ST, NL Z.., NL Z..ST, TNL.. Contactor Relays

Technical Data

Screw Terminals and Spring Terminals

Magnet System Characteristics for NL... and NL...ST Contactor Relays

Contactor relay types		NL.. and NL..ST - 3 W
Rated control circuit voltage U_c	V d.c.	12 ... 250
Coil operating limits acc. to IEC 60947-5-1:		See conditions for use page 40
Drop-out voltage in % of U_c		roughly 10 ... 30 %
Coil consumption - Average values		
- pull-in value	W	3.0
- holding value	W	3.0
Operating time		
between coil energization and:		
- N.O. contact closing	ms	50 ... 100
- N.C. contact opening	ms	20 ... 70
between coil de-energization and:		
- N.O. contact opening	ms	10 ... 17 ⁽¹⁾
- N.C. contact closing	ms	16 ... 27 ⁽¹⁾

(1) the use of surge suppressors increases the opening time on a scale of 1.1 to 1.5 for a varistor suppressor and on a scale of 1.5 to 3 for a transil diode suppressor.

Magnet System Characteristics for NL Z.. and NL Z..ST Contactor Relays

Contactor relay types		NL Z.. and NL Z..ST - 2.4 W
Rated control circuit voltage U_c	V d.c.	24 and 48
Coil operating limits acc. to IEC 60947-5-1:		See conditions for use page 40
Drop-out voltage in % of U_c		roughly 10 ... 30 %
Coil consumption - Average values		
- pull-in value	W	2.4
- holding value	W	2.4
Operating time		
between coil energization and:		
- N.O. contact closing	ms	50 ... 100
- N.C. contact opening	ms	20 ... 70
between coil de-energization and:		
- N.O. contact opening	ms	10 ... 17 ⁽¹⁾
- N.C. contact closing	ms	16 ... 27 ⁽¹⁾

(1) the use of surge suppressors increases the opening time on a scale of 1.1 to 1.5 for a varistor suppressor and on a scale of 1.5 to 3 for a transil diode suppressor.

Magnet System Characteristics for TNL.. Contactor Relays

Contactor relay types		TNL..
Rated control circuit voltage U_c	V d.c.	9 ... 264
Coil operating limits acc. to IEC 60947-5-1:		See conditions for use page 40
Drop-out voltage in % of U_c		roughly 20 ... 35 %
Coil consumption - at pull-in and holding		
- U_c max	W	8.5
- U_c min	W	2.5
- U_c	W	5
Operating time		
between coil energization and:		
- N.O. contact closing	ms	50 ... 100
- N.C. contact opening	ms	20 ... 70
between coil de-energization and:		
- N.O. contact opening	ms	10 ... 17 ⁽¹⁾
- N.C. contact closing	ms	16 ... 27 ⁽¹⁾

(1) the use of surge suppressors increases the opening time on a scale of 1.1 to 1.5 for a varistor suppressor and on a scale of 1.5 to 3 for a transil diode suppressor.

NL..., NL Z..., NL..ST, NL Z..ST, TNL Contactor Relays

Technical Data

Screw Terminals  & Spring Terminals 

Mounting Characteristics

Contactor relay types	NL..., NL Z..., NL..ST, NL Z..ST, TNL
Mounting distances	The contactors can be assembled side by side, except TNL see table below
Fixing	
on DIN rail according to IEC 715 and EN 50022	 35 x 7.5 mm
	 35 x 15 mm
by screws (not supplied)	2 x M4

Mounting Distance (for TNL)

d mm	D mm	Ambient temperature °C
5	20	≥ 20

Conditions for Use

The contactor utilization conditions relating to the mounting position, ambient temperature and control voltage operating limits are summarized in the table below.

Contactor relay types	Mounting position	Ambient temperature	Control voltage
NL..., NL..ST	1, 1 ± 30°, 2, 3, 4, 5 (1)	≤ 55 °C 55 ... 70 °C	0.85 ... 1.1 x U _c U _c
NL Z..., NL Z..ST	1, 2, 3, 4, 5 (1)	≤ 55 °C 55 ... 70 °C	0.85 ... 1.1 x U _c U _c
TNL..	1, 1 ± 30°, 2, 3, 4, 5 (1)	≤ 55 °C	U _c min U _c max

(1) (T)NL 22E and NL Z 22E not allowed in position 5

Mounting Positions (see the above table for authorized positions)

Industrial^{IT}

Industrial^{IT} Enabled Products

Control^{IT} Low Voltage Products

Industrial^{IT}

As a key element of its business strategy, ABB has committed to a broad program of product development and positioning under the Industrial^{IT} umbrella.

The **Industrial^{IT} Enabled Products** will provide all the relevant information like product identification, documentation, certificates and product data in electronic form in the engineering and work environment.

The **Industrial^{IT} Enabled Products** provide for this purpose all the data you need to do the right selection. Standardized product identification by type designator, identity number and international article number (EAN-code) insure that the right product is handled and delivered. Documentation on-line is available.

Most of the Low Voltage Products have already been Industrial^{IT} enabled among **Control^{IT}** Block Contactors, Mini Contactors and **Control^{IT}** Overload Relays and Electronic Overload Relays.

For further information, please consult the ABB Website

 www.abb.com/industrialit
